

Address Validation

**A faster and more
accurate way to
capture addresses**

Real-time Address Lookup

A faster and easier way to capture and verify addresses for your online forms and e-store checkouts

Loqate's address validation predicts, validates and autocompletes the address as you type on web forms. This enables faster checkout completion and accurate address entry for successful delivery fulfilment.

Reduce keystrokes

Reduce required keystrokes by more than 70% by dynamically predicting and filtering search results to retrieve address.

Enhance user experience

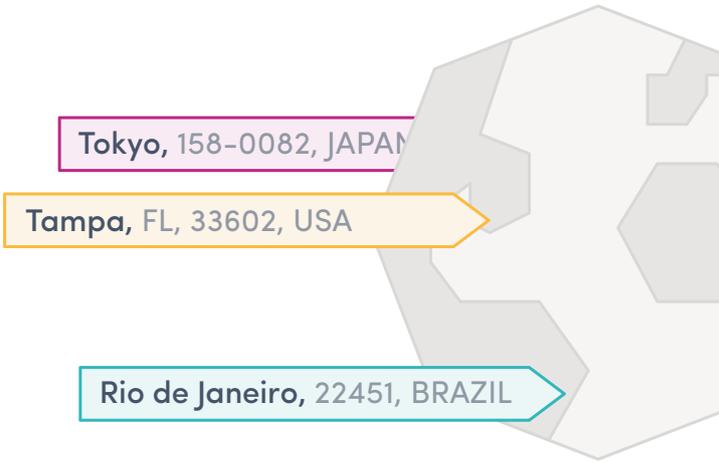

With predictive type ahead, a list of validated addresses is shown for quick selection, making form filling a breeze.

Improve successful delivery rate

Delivery failure rate is reduced by 70% with more orders being successfully delivered to the right addresses.

Global Data

Address data for 245 countries and territories, sourced from globally-verified service providers

Tokyo, 158-0082, JAPAN

Tampa, FL, 33602, USA

Rio de Janeiro, 22451, BRAZIL

Loqate helps every business reach every customer through proprietary partnerships with international postal providers. Our data is updated automatically, in some cases daily, to ensure the information you receive is complete and accurate.

Automatic updates

The most up-to-date and complete address information available. Our database is updated as soon as new information is released by postal authorities for unparalleled reliability.

Global postal network

As licensed resellers, we source address data directly from postal operators including USPS, UK Royal Mail, Canada Post, Australia and New Zealand Post for a guaranteed single-best-record.

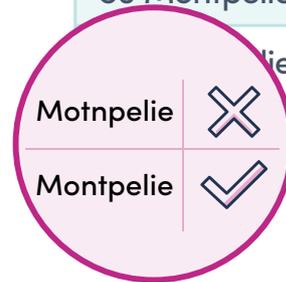

Enhanced datasets

Improve your databases with CASS, AMAS and SERP certified data processing, mapping, newly-built, geospatial, and sub-premise data plus standardised ZIP+4 postal codes.

Fuzzy Matching

Entry-based errors are a thing of the past with unique auto-correcting technology designed for addresses

50 <u>Motnpie</u>
50 Montpelier Walk, Cheltenham
50 Montpelier Road, Brighton
Montpelier, Bristol
Montpelier Road, London

Loqate's "fuzzy matching" capability recognises language patterns as a user types. It instantly identifies and corrects typos, abbreviations, and transpositions converting user-generated entries into accurate standardised addresses.

Spelling mistakes

Auto-correct eliminates the risk of human-error by providing only valid entries. Bad address data results in failed deliveries, poor user experience, and inefficient operations.

Abbreviations

Translate abbreviations such as St., Rd. into their expanded form to convert manual entries into standardised, deliverable addresses for quality database consistency.

Transpositions

It's really common for people to switch adjacent letters as they type, (ie. Aveneu/Mian St). Our tool detects this switch and still understands what the user was looking for.

The Platform

Our platform is run from Amazon Web Services to provide ongoing secure, reliable service.

The Loqate platform utilises cloud environments to supply the best throughput and reliability.

Easy integration

In addition to a library of plugins and integrations to ecommerce and CRM platform, Loqate can be installed on websites and mobile applications via web API. Our support team is always available to help if you get stuck.

Data coverage

We supply location data for over 245 countries and territories sourced from internationally verified partners including postal networks, government agencies, and official databases.

Reliability

Our secure RESTful API is served over HTTPS ensuring seamless and reliable access to our suite of services. Our target uptime is 99.999% including maintenance.

Harmony RightAddress is now Loqate, a GBG solution.
Over 19,000 customers and partners trust Loqate, you'll be in good company.
